# CommAlert

Visualise and manage any device on any network, from smartphones through to satellite trackers, Bluetooth beacons to LoRaWAN sensors.

- Automate actions and alerts using the ultra-flexible rules generator
- Communicate with any type of device using any type of protocol
- Broadcast messages to all or specified devices based on your own criteria
- Integrate with Alarm and Emergency Control Centres (internal or external)
- Access your data easily and integrate with 3rd party systems using our API
- Import data using our bulk uploader and onboard new customers with ease

- Utilise useful and relevant data stored against users and devices
- Utilise our impressive range of customisable map tools and map types
- Manage your escalation and response coordination through one system
- Set up automatic check-ins, SOS alerting, messaging and monitoring
- Store your data securely in any of our authorised global data centres

How is the **COMMALERT Portal** used today?

- Helping businesses to satisfy duty of care obligations and safety legislation
- Managing and optimising assets in remote, rural and urban environments
- Protecting lone workers and travellers globally in complex and challenging environments

- Managing journeys, vehicles and driver behaviour
- Monitoring vessels, maritime equipment and people at sea
- Tracking aircraft, airport assets, flights and business travel

ALL IN ONE PLACE

With the COMMALERT Portal you have everything you need to monitor your entire network of people and things. Its intuitive user interface, quick search tools and rules engine makes it easy to navigate, visualise and manage your assets in real-time. Through one system, you can communicate with people and assets using a wide-range of notification channels and message protocols from SMS and email through to voice.
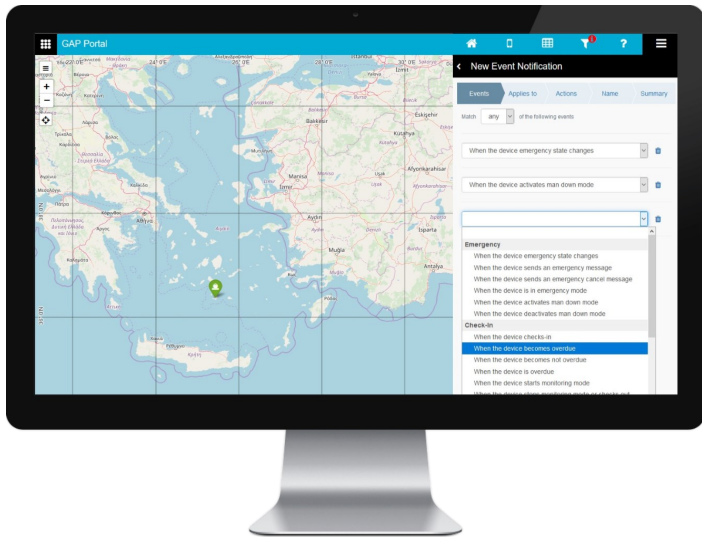

PRIVACY BY DESIGN

The COMMALERT Portal allows you to manage even the most complex organisational structures, data protection requirements and permission hierarchies. Strict segmentation of data is applied to all classes and components, allowing you and your customers to organise the system into cohesive elements and responsibilities. Delegated administration can be achieved using a number of core COMMALERT components such as Tenants, Groups, Roles & Collections.

POWERFUL AUTOMATION

The COMMALERT Portal makes it easy for you to automate time-sensitive actions and notification based on specific criteria an operational objectives. Our powerful Event Engine allows you to manage and optimise all of your devices and users with minimal manual intervention. You can set up rules to automate the management of any type of device or user, simply and efficiently.

CommAlert

gap guardian

Turn your smartphone into a safety tool for lone workers and business travellers in ways you haven't seen before.

Check in anytime or be automatically prompted, so you never forget

Have someone watch over you when entering a high risk area for added peace of mind

Raise an SOS alarm using the on-screen button, discrete Bluetooth accessories and/or wearables

Perform functions hands-free with voice activated smart assistants

Forward your travel bookings via email and GAP Guardian will organise them into a schedule for your trip

Quickly and accurately connect with key contacts using the Quick Call button

Travel safer with relevant, timely alerts and travel advice sent directly to your app

Automatically detect man-down using the in-built accelerometer or external hardware

Configure the app to suit your needs, either through the app's settings or as an administrator through the GAP Portal

Enhance in-building location using low-cost and low-energy Bluetooth beacons

Exchange text messages with other users and operators - send photos and notes

Get automatically notified when you're in or near a potentially unsafe location

Quickly access important documents such as corporate policies and travel documents

Talk to us today to set up a trial account

HIGHLY CUSTOMISABLE

Each core element of the app can be switched on and off via the GAP Portal to allow you to build tailored solutions for your clients. You can configure the app's settings and configuration based on complex permissions and business hierarchies. The app can be rebranded allowing you to incorporate your own logos, colours and icons.

GAP INTEGRATED

GAP Guardian has been built from the ground up by the same team that developed the Global Alerting Platform. It is the most feature rich companion to our other GAP Products, and one of the most affordable, making it the most popular device on our platform.

FOCUSED DESIGN

GAP Guardian has a clean and functional design, but at the same time is highly engaging. Its simple and colourful buttons show functionality clearly, and the use of icons makes it easier for the user to navigate the app. GAP Guardian follows the same look and feel as other GAP Products, making it a seamless user experience across different interfaces.

Join us on our journey to connecting the world with our platform...

GAP CHAMPION
